

# *GREY LAGOON MARBLE*

## *DARK AND LIGHT*

**GREY LAGOON** is a very new grey (dark and light) fossiliferous limestone with exceptional mechanical features: among others, high hardness value, perfect polishing attitude, low water absorption, high strength. **GREY LAGOON** is certainly one of the hardest limestone in the world scenario.

The fossils present in the stone confer a particular attractive texture:

The average annual quarry production is about 2000 square metres of medium and large size blocks

### PRODUCTS

- Polished tiles (also in "modul tiles"). Thickness: 10,11,12,15,20 and 30 mm
- Antique style treated tiles (acid treated, brushed, etc.). Dimensions : from 10x10 cm till 90x90 cm and random length, with different thickness in relation to the size.
- Strips of various widths and thickness
- Cut-to-size products, columns, stairs
- Stone bricks for building cladding or wall making, with antique style. Thickness 2 and 3 cm..

## USES

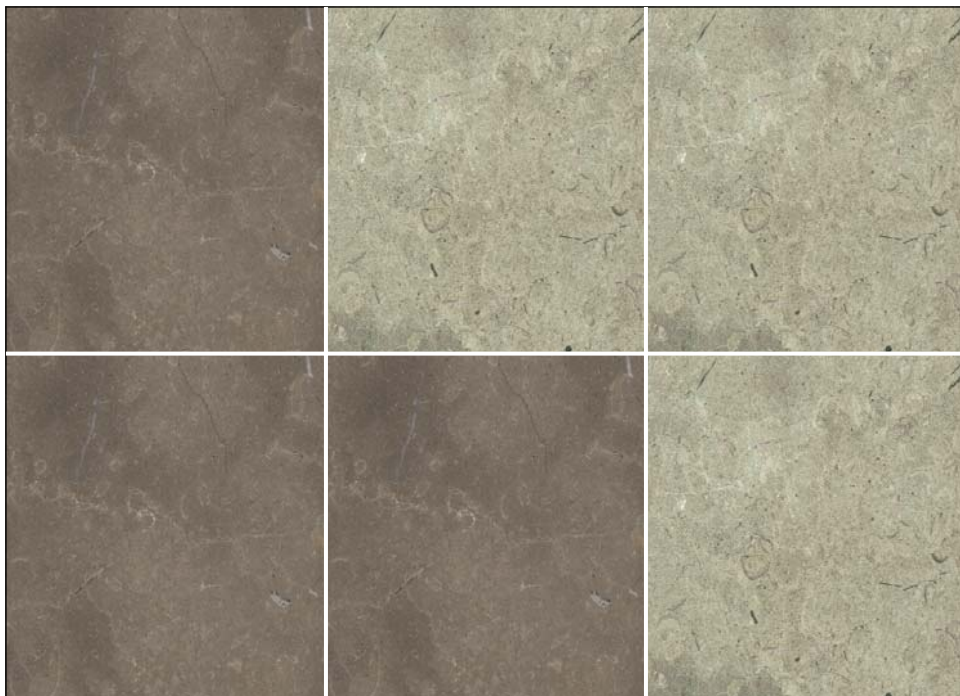

**GREY LAGOON** is a stone very elegant and fashionable, highly demanded in many markets, also due to the lack of good polishing grey materials. As a matter of fact the main use is for internal paving works, following its high grade of polishing attitude which gives value and prestige to the environments.

This stone is ideal for offices, large rooms, halls, banks floors. Moreover, it's important to remind that following its high mechanical characteristics **GREY LAGOON** is certainly suitable for area with high grades of trampling. The various available sizes and the two different colour tonalities, allow any type of artistic laying design.

GREY LAGOON is easily and well combined with limestones and travertines.

## MECHANICAL FEATURES

Water absorption	0.75%
Density	2690 kg/mc
Uniaxial compress.strength	2068 kg/cm <sup>2</sup>
Flexural strength	915 kg/cm <sup>2</sup>
Abrasion resistance	1.84 mm
