

QUARTZITE

GOLDEN PLANET

NATURALLY CLEFT QUARTZITE

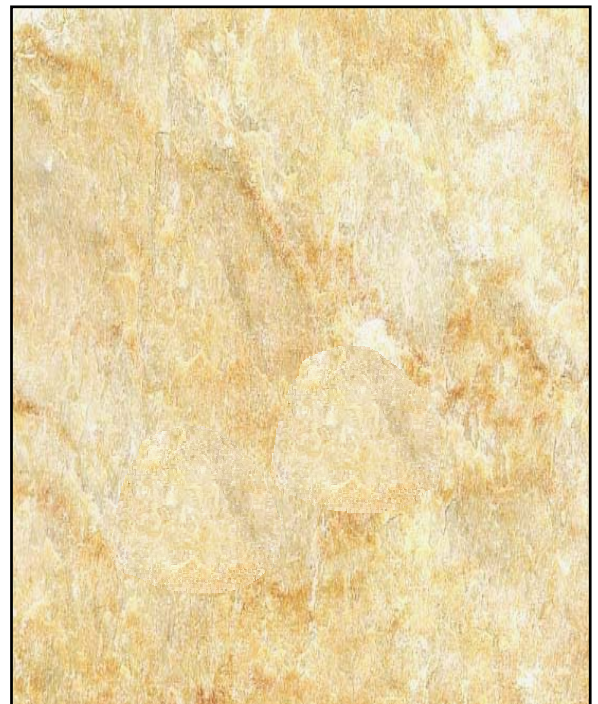

*WITH AN EXCEPTIONAL ELEGANT
YELLOW-GOLDEN COLOUR*

GOLDEN PLANET Quartzite is an high grade micaceous metamorphic naturally cleft quartzite imported by ROCK PLANET since 2002.

The stone, geologically definable as a real quartzite, shows a very attractive elegant light yellow - golden colour, given by feeble oxidation of Iron (Fe) micas.

GOLDEN PLANET Quartzite has a very fine grain and an irregular banded structure.

MECHANICAL FEATURES

GOLDEN PLANET Quartzite, due to its particular geo-mineralogical features, has very good mechanical - chemical properties. High flexural and compressive strength, good resistance to acids attack, low water absorption.

PRODUCTS and SIZES

- Crazy paving ("Opus Incertum") giant with minim. inner diagonal 30 cm; thickness 1,5 - 2,5 cm
- Crazy paving standard
- Small cut tiles 10 and 15 cm x random length; thickness 1,5 - 2,5 cm
- Cut tiles 20x20cm; 30x30cm; 40x40 cm; 20x40cm; 30x60cm; 1, 2, 3 and 4 cm thick

USES and WORKS

GOLDEN PLANET Quartzite is recommended both for external works and interior cladding projects.
