

# ONYX “ROSE of AFRICA”

ROSE of AFRICA is a very attractive new rose-reddish onyx, extracted in Eastern Africa since the beginning of 2003. Quarry operations started from the top hill with immediate good results.

The large quarry, where also a light beige travertine is produced, guarantees the long term production of onyx blocks of any sizes, that allows the commercialization of large slabs, too.

ROCK PLANET has a particular selling agreement with the quarry owner to sell finished and semifinished products.

ROSE of AFRICA is a fine grain translucent onyx with very elegant and attractive globular and typical oniciated banded textures. Colours vary from pale rose to reddish-purplish, of different tonalities. Selection of colours is always guaranteed.

**ROSE of AFRICA** is currently available in blocks, slabs, calibrated tiles, cut-to-size products and any other ornamental decorative elements.

### AVAILABLE ONYX PRODUCTS

**Blocks:** up to 5-6 m<sup>3</sup> (300 x 140 x 150 cm)
